

FastDataGov Platform Guide

2026-08-19 | <https://datagov.fastme.com>

FastDataGov is an open-source, business-friendly data governance platform built with FastHTML, PostgreSQL, and Python. It provides a unified catalog, lineage, data quality, stewardship, ownership, certification, and access-request experience across connected data platforms.

Know which data to trust — and why.

FEATURES & AVAILABILITY

One place to discover, trust, and govern data.

Available means implemented in the core platform. Pilot-ready identifies the production-capable Snowflake adapter. Contract-ready means the interface is complete while tenant transport still requires implementation.

9 core capabilities

1 pilot-ready adapter

2 contract-ready adapters

AVAILABLE

FREE · MIT

Unified data catalog

Search technical and business metadata across connected platforms with owners, domains, classifications, freshness, and trust signals.

AVAILABLE

FREE · MIT

Business glossary

Define shared language, connect terms to assets, and version business definitions without changing source-platform metadata.

AVAILABLE

FREE · MIT

Lineage & impact

Explore upstream and downstream dependencies, column evidence, pipeline context, confidence, and manually curated gaps.
